GMHA & GRMC SYNDROMIC SURVEILLANCE REPORTS & DPHSS MORBIDITY SUMMARY FOR 1ST QUARTER 2022

OFFICE OF EPIDEMIOLOGY AND RESEARCH

GUAM DEPARTMENT OF PUBLIC HEALTH AND SOCIAL SERVICES

April 7, 2022

Doc. No. 36GL-22-1854.*

This report summarizes emergency room syndromic surveillance data from the Guam Memorial Hospital Authority (GMHA) reported to the Department of Public Health and Social Services (DPHSS) for the first quarter of 2022 (Figure 1). GMHA-ER data are also presented on flu/ILI by age (Figure 2), and hospital admissions for influenza are provided in Figure 3. GRMC-ER syndromic surveillance data for the first quarter is now also provided in Figure 4.

This report also summarizes all morbidity reports to the DPHSS for the first quarter of 2022 (Figure 5). All of these data include COVID-19 cases, unless specified (i.e. influenza A or B). All COVID-19 related specific data are available on the DPHSS COVID-19 dashboard: COVID-19 | DPHSS (guam.gov)

As can be seen in Figure 1, there is a very clear downward trend in ER visits at GMHA in March 2022 for three main categories: Flu/ILI with fever, acute URI and pneumonia. Since these data included COVID-19-like illnesses, this is due to the decrease in COVID-19 infections. Examining Flu/ILI with fever by age (Figure 2), the highest number of cases were among those 20-49, followed by those 65 years and older. All ages show the peak and decline associated with the SARS-CoV-2/COVID-19 surge and decline in the first quarter of 2022. There were only 3 influenza admissions at GMHA in the first 8 weeks of 2022 (Figure 3).

For GRMC (Figure 4), data on the six key syndromic conditions can now be compared to GMHA (Figure 1) for the same conditions. GRMC shows a similar pattern of decline but the decline begins earlier (week 5 of 2022). For syndromic surveillance purposes, since both hospitals show the same pattern, this implies similar trends are being observed at both hospitals. The main differences between GMHA and GRMC are that GMHA shows greater volume of ER utilization overall for all syndromic conditions, and there are substantially more cases of acute URI also seen at GMHA, compared to GRMC.

Figure 5 provides the summary of morbidity reports to DPHSS and Figure 6 provide the Guam Public Health Laboratory (GPHL) influenza surveillance positives for the first quarter of 2022. The 26,260 coronavirus cases in the first quarter of 2022 constitute 55.7% of all cases during the SARS-CoV-2/COVID-19 pandemic through March 26, 2022.

Data on SARS-CoV-2/COVID-19 can be found at: http://dphss.guam.gov/covid-19/

GUAM PUBLIC HEALTH LABORATORY (GPHL) INFLUENZA SURVEILLANCE POSITIVES: 1st Quarter 2022

To capture influenza activity, the GPHL is utilizing the CDC Influenza SARS-CoV-2 (Flu SC2) Multiplex Assay using the Applied Biosystem 7500 Fast Dx Real-Time PCR Instrument. Samples submitted for SAR-CoV-2 PCR tests were tested on the new assay. Influenza results are not reported, they are for surveillance purposes. Influenza Surveillance data are reported weekly in the U.S. WHO Collaborating Laboratories web-based managed by the Epidemiology and Preventive Branch of Influenza Division at CDC.

Please feel free to send any influenza specimens for subtyping to the GPHL.
