GMHA & GRMC SYNDROMIC SURVEILLANCE REPORTS & DPHSS MORBIDITY SUMMARY FOR 1ST, 2nd & 3rd QUARTERS 2022 (1/8/2022 to 10/1/2022)

OFFICE OF EPIDEMIOLOGY AND RESEARCH
GUAM DEPARTMENT OF PUBLIC HEALTH AND SOCIAL SERVICES

October 5, 2022

Doc. No. 36GL-22-2592.*

This report summarizes emergency room syndromic surveillance data from the Guam Memorial Hospital Authority (GMHA) reported to the Department of Public Health and Social Services (DPHSS) for the first, second and third quarters of 2022 (Figure 1). GMHA-ER data are also presented on flu/ILI by age (Figure 2), and hospital admissions for influenza are provided in Figure 3, along with recent ER admits for influenza (discharged to home). GRMC-ER syndromic surveillance data for the first, second and third quarters are provided in Figure 4.

This report also summarizes all morbidity reports to the DPHSS for the first, second and third quarters of 2022 (Figure 5). All of these data include COVID-19 cases, unless specified (i.e. influenza A or B). All COVID-19 related specific data are available on the DPHSS COVID-19 website and dashboard: http://dphss.guam.gov/covid-19/

As can be seen in Figure 1, there is a very clear downward trend in ER visits at GMHA from March to May 2022 for Flu/ILI with fever, but a rise in acute URI. The was an uptick in late August and early September for pneumonia, but this has also decreased. Examining Flu/ILI with fever by age (Figure 2), there was an uptick among elderly 65+ years and those 20-49, but these have started to decrease, but there was another uptick in September among elderly 65+years.

There have been consistent influenza admissions at GMHA and ER visits discharged to home, for Influenza A during the second and third quarters (Figures 3 & 4).

For GRMC (Figure 5), data on the six key syndromic conditions can now be compared to GMHA (Figure 1) for the same conditions. GRMC shows an increase in Flu/ILI with fever in the second and third quarters. The main differences between GMHA and GRMC are that GMHA shows greater volume of ER utilization overall for all syndromic conditions, and there are more cases of acute URI also seen at GMHA, compared to GRMC.

Figure 6 provides the summary of morbidity reports to DPHSS and Figure 7 provide the Guam Public Health Laboratory (GPHL) influenza surveillance positives for the first quarter of 2022. **There is a definite increase in Influenza A in this 3rd quarter 2022 as evidenced by morbidity reports, and along with hospital admissions, ER visits and laboratory analyses.**
